Profile Summary

Final-year Computer Science Engineering student with a solid background and passion for deep learning, machine learning, and NLP, and a desire to be a part of innovative and problem-solving projects.

Education

Kalinga Institute of Industrial Technology (CGPA-9.47) **Sep. 2022 – May 2026**
Bachelor of Technology in Computer Science and Engineering *Bhubaneswar, Odisha*

Bhogpur K.M. High School (Percentage-93.80) **Jul. 2020 – Apr 2022**
Higher Secondary Education *Bhogpur, West Bengal*

Bhogpur K.M. High School (Percentage-96.00) **Jan. 2014 – Feb 2020**
Secondary Education *Bhogpur, West Bengal*

Relevant Coursework

- Data Structures
- Software Engineering
- Analysis of Algorithms
- Database Management
- Artificial Intelligence
- Machine Learning

Projects

My Portfolio Project | *HTML, CSS, JavaScript* **June 2024**
- Developed a portfolio with HTML, CSS, JS.
- Implemented a contact form that automatically saves submitted user information into an Excel file.

Movie Recommender System | *ML, Data Analytics* **December 2024**
- Created a content-based movie recommendation system based on cosine similarity for TMDB data, incorporating cast, crew, genres, and keywords to provide precise and personalized movie recommendations.
- Developed an interactive Streamlit web application to display the best movie recommendations with posters and user-friendly UI.

Human Pose Detection | *ML, Data Analytics* **February 2025**
- Developed a deep learning-based yoga pose classification model using TensorFlow, MediaPipe, and OpenCV by extracting pose keypoints from images, performing feature normalization, and training a Conv1D neural network with residual connections and squeeze-and-excitation blocks.

AI Code Generator | *Ollama, Streamlit* **June 2025**
- Built an AI code generation tool using Streamlit and the Llama3 model from Ollama, which allows users to write Python, C++, Java, JavaScript, and HTML/CSS code based on natural language inputs.
- Integrated LLM APIs with a custom interactive interface built using streamlit, which includes features such as prompt engineering, dynamic language support, and live code rendering with syntax highlighting.

Smart Agriculture App | *ML, DL, React* **November 2025**
- Created an interactive web application using React js for real-time plant disease detection and prediction of their cure and prevention as well as soil and weather-based crop recommendation.
- Trained a lightweight per-crop Mresnet50 model (mango, rice, potato, etc.), efficientnetB0 model for soil, and a random forest model for weather on Google Colab for accurate image classification.
- Implemented static cure and prevention logic based on disease prediction for actionable and static logic based on soil crop prediction and an api-based weather prediction and then crop prediction. Optimized for deployment on resource-constrained environments by modularizing and loading models on demand.

Technical Skills

Skills: C++, C, Python, HTML, CSS, SQL, NLP, CNN, RNN, LSTM, ML, AI, Tableau, PowerBI, AWS (EC2, S3, VPC, Cloudwatch, Alarm)
Developer Tools: VS Code, Jupyter Notebook, Google Colab
Technologies/Frameworks: Git, GitHub

Personal Information

Languages: English(Professional Proficiency), Hindi, Bengali(Native Proficiency)
Hobbies: Football, Music
